FERTILIZER MANAGEMENT AIDS

ContaiN™ Urea NUE Wheat Trial

Results

Objective(s)

- Evaluate the yield response to ContaiN™ treated urea compared to grower standard untreated urea.

Overview

- Nitrogen is commonly used in most major commodity crop productions.
- All nitrogen sources are susceptible to loss pathways via the nitrogen cycle.
- Only specific forms of nitrogen can be utilized and absorbed by the plant.
- ContaiN™ is a nitrogen management aid with XN Technology™ and NBPT specifically focused for use with UAN applications to aid in the utilization and uptake of nitrogen, as well as reduce nitrogen loss.

Trial Details

Locations and Crop Management:

CROP: Wheat

YEAR(S): 2019

DATA SOURCE: Frontline Crop Solutions, Garrettson, SD, USA

CROPPING CONDITIONS: Trials conformed to local cropping practices.

PRODUCT APPLICATION RATE: ContaiN™ 2 qt/ton

Summary

- ContaiN™ treated urea outyielded untreated urea by 18.28 bu/ac.
- By using ContaiN™ on urea, yield potential is increased more than using urea alone or leaving your crop untreated.

18.28

bu/ac

Increase with urea + ContaiN™ over untreated urea

Individual results may vary, and performance may vary from location to location and from year to year. This result may not be an indicator of results you may obtain, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible.
